TCCH UX Accessibility | Concordia U - Postmarginal Collab

Invited [Peter Farbridge](#) jercabaneros@gmail.com [Arianna Sanchez Narita](#)

Attachments  [TCCH UX Accessibilty | Concordia U - Postmarginal Collab](#)

Meeting records  [Transcript](#)

Summary

Peter Farbridge welcomed UI/UX specialists Jerwin Cabañeros and Arianna Sanchez Narita, who expressed excitement for the accessibility-driven project inspired by the experiential design of the "Center cannot hold" website, whose thematic mushroom concept will be integrated into the redesign to meet WCAG double-A certification. The participants discussed necessary accessibility improvements, including enlarging the UserWay icon, providing descriptive text for media, implementing closed captioning, and considering neurodiverse and physically handicapped audiences through potential features like eye-tracking technology, while maintaining a psychophysical and multimodal design aesthetic. Peter Farbridge suggested that Jerwin Cabañeros and Arianna Sanchez Narita meet with user artists before the end of February to gather feedback, and all participants agreed to share documentation via a Google Drive folder for future funding proposals and project continuation discussions after their final submission of prototyping and wireframing on Sigma.

Details

- **Project Introduction and Team Specialization** Peter Farbridge welcomed Jerwin Cabañeros and Arianna Sanchez Narita to the project, expressing gratitude for

their involvement ([00:00:00](#)). Arianna Sanchez Narita noted that both she and Jerwin Cabañeros specialize in UI and UX, viewing the project as a great opportunity, especially since it is accessibility-driven. Jerwin Cabañeros mentioned that while they have UX design class experience, integrating accessibility into design is new territory for them, and they are excited to work on it ([00:04:14](#)).

- **Review of Previous Work and Design Inspiration** Jerwin Cabañeros shared that Kevin Kit Low had already presented the website, "Center cannot hold," which they found beautiful, highlighting the use of a parallax effect and the successful integration of an experiential element into the design ([00:05:12](#)). Arianna Sanchez Narita added that the website's thematic scheme of mushrooms and its unconventional approach to design, combined with the necessity of meeting accessibility guidelines, drew them to the project, finding Kevin Kit Low's explanation inspiring ([00:06:05](#)). Peter Farbridge acknowledged that the existing site breaks many traditional website rules regarding relationality and the lack of linearity in information presentation ([00:06:56](#)).
- **Project Longevity and Thematic Goals** Peter Farbridge discussed the challenge of keeping unique sites like theirs alive, citing advice from digital artist David DeJavi. They explained that returning to the project to add new artists and address accessibility is crucial for maintaining the site's activity and renewal. Arianna Sanchez Narita mentioned the plan to incorporate the thematic mushroom concept from the previous website into the new design to create a more sensory and "out of box" experience, while still meeting WCAG requirements ([00:08:00](#)).
- **Web Content Accessibility Guidelines (WCAG) and Implementation Focus** Peter Farbridge inquired about the parameters of WCAG for achieving official site certification. Arianna Sanchez Narita explained that WCAG focuses on making content more readable and accessible globally for people with common disabilities like being deaf or blind, which includes adding detailed descriptions for images and other content ([00:10:05](#)). They aim for the website to reach the double-A tier of WCAG certification, which is necessary because the current Postmarginal website offers minimal accessibility tools ([00:11:16](#)).
- **Target Audiences for Accessibility and Technical Considerations** Peter Farbridge mentioned the need to consider neurodiverse individuals, as well as deaf and blind audiences, and those with physical handicaps who may need alternative access to text beyond a standard keyboard ([00:11:16](#)). They also brought up the

existing UserWay plugin, which helps adjust text and accessibility options, asking how the team plans to interface with it ([00:13:17](#)). Jerwin Cabañeros pointed out that the current UserWay icon on the website is too small and visually inconspicuous, making it hard for users with disabilities to immediately notice or access the contrast and font toggles ([00:14:38](#)).

- **Specific Accessibility Improvements Proposed** Arianna Sanchez Narita agreed that the small icon is a problem, noting that they initially struggled to figure out its purpose ([00:15:35](#)). Arianna Sanchez Narita emphasized that compliance with WCAG requires more than just modifiable text, suggesting changes to how information is displayed on the screen, like making important elements more evident and less crucial images smaller. They also proposed adding more descriptive text for video and audio content, and implementing close captioning to meet at least the double-A WCAG standard ([00:16:24](#)). Arianna Sanchez Narita also introduced the idea of integrating eye-tracking technology for users who cannot use a keyboard or mouse ([00:17:17](#)).
- **Design Aesthetic and Multimodal Expression** Peter Farbridge stated that they will defer to Kevin Kit Low on visual design elements. Peter Farbridge explained that Postmarginal's focus is on multimodal expression, aiming for the website's layout to evoke a psychophysical, calming response and invite visitors into an artistic, theatrical experience, moving away from a commodified relationship with information ([00:18:11](#)). They suggested integrating more sound, such as natural sounds like water, which could be triggered by scrolling, but noted that a mute option must be available ([00:20:32](#)).
- **Consultation with Artists and Project Timeline** Peter Farbridge proposed that Jerwin Cabañeros and Arianna Sanchez Narita meet with artists from the target communities to understand their challenges and gather feedback. Both Jerwin Cabañeros and Arianna Sanchez Narita enthusiastically agreed to this, emphasizing the value of firsthand experience from the community ([00:21:40](#)) ([00:25:54](#)). Peter Farbridge suggested potential artists, including a deaf dancer and a visual artist in a wheelchair, but stressed the importance of engaging meaningfully with these communities ([00:23:37](#)). Jerwin Cabañeros inquired about the timeline for scheduling meetings with artists, noting that their midterms are in mid-to-late March ([00:25:54](#)). Peter Farbridge proposed a schedule including a first artist meeting before the end of February to frame the project, clearing the first two weeks of March for midterms, and resuming meetings in the second and third weeks of March ([00:27:55](#)).

- Project Deliverables and Future Collaboration** Peter Farbridge expressed a dream that the project will lead to a proposal for a funding body like Heritage Canada or the Canada Council, potentially allowing Jerwin Cabañeros and Arianna Sanchez Narita to continue their involvement professionally after their class concludes ([00:30:10](#)). Arianna Sanchez Narita explained that their final submission will involve prototyping and wireframing on Figma to demonstrate the user flow and design ([00:31:20](#)). Jerwin Cabañeros and Arianna Sanchez Narita confirmed they would be open to discussing the continuation of the project into a full-fledged website after graduation. Peter Farbridge requested collaboration on documentation, including notes from their meeting with Kevin Kit Low, to support the funding proposal ([00:32:12](#)).
- Clarification on the Tagging System** Jerwin Cabañeros asked for clarification on the website's tagging system ([00:34:24](#)). Peter Farbridge explained that the tagging system, developed with Crystal Chan, moves away from social identifiers (like "blind person" or "deaf person") and focuses on the themes and creative work of the artists, such as "ancestors" ([00:35:32](#)). The artists themselves choose the tags that describe their work, ensuring that the system reflects what fascinates them creatively. Peter Farbridge offered to provide a table of the tags used for the site ([00:38:02](#)).
- Next Steps and Communication Plan** Arianna Sanchez Narita confirmed the next meeting with Kevin Kit Low is scheduled for 3 p.m. the following day, and Peter Farbridge offered availability between 3 and 4 p.m. for any questions ([00:39:03](#)). Peter Farbridge suggested setting up a shared Google folder to organize all meeting notes, schedules, and shared documents. Both Jerwin Cabañeros and Arianna Sanchez Narita agreed that using a Google Drive for shared communication would be ideal ([00:40:23](#)).

Suggested next steps

- ☐ Peter Farbridge will set up the first meeting with an artist before the end of February upon confirmation from Arianna and Jewin.
- ☒ Peter Farbridge will share a Google folder with Jerwin Cabañeros and Arianna Sanchez Narita to share a schedule, meeting notes, and other project materials.
- ☒ Peter Farbridge will find the table of all the tags that were used for the site and send it to Jerwin Cabañeros.

- ☐ Jerwin Cabañeros and Arianna Sanchez Narita will send Peter Farbridge a text about the project prototype so he can communicate that information to the artists before the first meeting.
- ☐ Jerwin Cabañeros and Arianna Sanchez Narita will let Peter Farbridge know what was discussed with Kevin.

TCCH UX Accessibility | Concordia U - Postmarginal Collab - Transcript

00:00:00

Jerwin Cabañeros: Hello.

Arianna Sanchez Narita: Hello.

Jerwin Cabañeros: Hi.

Arianna Sanchez Narita: Hi.

Peter Farbridge: Okay, I'm not hearing anything. Must be me, huh? All right. Um, can you hear me?

Arianna Sanchez Narita: Hello.

Jerwin Cabañeros: Yes, we can hear you.

Peter Farbridge: Okay. Okay.

Arianna Sanchez Narita: Yes.

Jerwin Cabañeros: Do you hear us?

Peter Farbridge: Yeah. Loud and clear. Both you. Hi, German. Hi, Ariana.

Arianna Sanchez Narita: Hello.

Peter Farbridge: Nice to meet you. You would like to go? Uh, no. No video today. I'm fine with that. I uh It's as you wish.

Jerwin Cabañeros: Uh, I could turn on.

Peter Farbridge: It's as you wish. Yeah. Good to see you. Good to see you. Yeah.

Jerwin Cabañeros: Yeah.

Peter Farbridge: Um Yeah. I thought uh um I'm like thanks for for agreeing to do this uh to do this project. It's it's amazing. I'm glad you're I'm glad you found the the presentation

00:04:14

Jerwin Cabañeros: Of

Peter Farbridge: interesting.

Arianna Sanchez Narita: Oh,

Peter Farbridge: Hi Ariana,

Arianna Sanchez Narita: hello Um,

Jerwin Cabañeros: course.

Peter Farbridge: good to meet you both.

Arianna Sanchez Narita: yes. Uh, but we're very very happy to do this because we both like kind of specialize in like UI and UX. So, it was like a beautiful opportunity to try something new,

Peter Farbridge: Uhhuh.

Arianna Sanchez Narita: especially since it's like accessibility driven. So,

Peter Farbridge: Yeah.

Arianna Sanchez Narita: it's also really exciting for the both of us and we're really excited.

Peter Farbridge: Cool.

Arianna Sanchez Narita: Um,

Peter Farbridge: Great.

Arianna Sanchez Narita: yeah.

Peter Farbridge: Do you have backgrounds in accessibility?

Jerwin Cabañeros: Yeah.

Peter Farbridge: I'm just curious like what drew you to the the site in particular?

Jerwin Cabañeros: Um not not really but uh I have taken like UX design class from before. Um, and I also have like uh I mean it's our it's our first time,

Peter Farbridge: Yeah.

Jerwin Cabañeros: but we're really interested in like you know it's it's our first time like basically integrating like the accessibility part into design.

00:05:12

Jerwin Cabañeros: So yeah, we're really excited to to work on it. But

Peter Farbridge: New territory. Yes,

Jerwin Cabañeros: yeah,

Peter Farbridge: that's wonderful. Like when making the site for us was like new territory. I guess you talk with Kevin Kit Low, huh? He came in to talk to you about it. Yeah. So, uh,

Arianna Sanchez Narita: Yes.

Peter Farbridge: what did he say? I'm just I'm

Arianna Sanchez Narita: Um I don't know if you want to go first

Peter Farbridge: curious.

Arianna Sanchez Narita: or

Jerwin Cabañeros: Um I mean to be honest like we will just have our first meeting tomorrow but he already have presented the website which to us is like really beautiful and like

Peter Farbridge: Yeah.

Jerwin Cabañeros: we were like really blown away by like you know his work for um I think it's called Uh what do you call it? Center cannot hold. Yeah. So it's really amazing.

Peter Farbridge: Yeah.

Jerwin Cabañeros: And he basically used like a parallax effect effect for the

Arianna Sanchez Narita: Yeah.

00:06:05

Jerwin Cabañeros: um you know like cuz like I I think you guys mentioned about like integrating the experiential experience into the website.

Peter Farbridge: Mhm.

Jerwin Cabañeros: Um and it was really well done. So uh yeah, we were just like uh I guess this is like a perfect opportunity to think about like other ways

Arianna Sanchez Narita: Thank you.

Jerwin Cabañeros: and how we could integrate the same theme to for the website. So yeah, I don't know if you have like something to

Arianna Sanchez Narita: Yeah. Um, yeah. No, just when he presented the website,

Jerwin Cabañeros: tell

Arianna Sanchez Narita: it was super fun because he had like this whole like thematic scheme of like mushrooms and going the unconventional route in terms of a website. So, that was really interesting. And I think that's what like kind of popped out to us cuz it's not the typical type of look. And the fact that like it has to do accessibility, has to meet accessibility guidelines was kind of interesting for us, which is what drew us to it.

00:06:56

Arianna Sanchez Narita: And he was very like fun and animated when explaining it. So that was that was really inspiring.

Peter Farbridge: Oh yeah.

Jerwin Cabañeros: Great.

Peter Farbridge: Yeah.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: He was he was wonderful to work with and he was so flexible because really it's sort of in some ways it breaks a lot of rules for making websites. So it's a little bit in terms of its relationality, the lack of linearity in terms of the presentation of the information as well. So it was I think for him too it was kind of like a fun thing you know like just to explore how that would happen. It took us a long time to develop um about two and a half years I guess in and all of the consultations with the communities also regarding how we're going to look at relationality in this sense. So it was really uh it was really a long uh a long process and a really really like a a labor of love in some ways. So so it's wonderful for for us and for me to come back to the project and to be able to keep it alive because one of the one of the advices that we got at the beginning was his name was David Dejavi.

00:08:00

Peter Farbridge: He's a digital artist and uh he said that you know like sites like these they never really survive. That's the only problem is that you know they're unique and they're beautiful but how do you how do you use them? How do you keep them up to date? How do you keep people interested in them? So this is something that we've been wrestling with. So to be able to come back and to add more artists to look at the accessibility, it's an opportunity also to keep the site alive and to keep it active and and you know continually renewing I guess as well. So it's a great it's a great opportunity for for us. Thanks. Thanks

Jerwin Cabañeros: of course.

Arianna Sanchez Narita: Um, yeah. Thank you.

Peter Farbridge: again.

Arianna Sanchez Narita: Um, what was I going to bring up? But yeah, we're going to meet with him tomorrow. So that's going to be interesting also because I think we kind of want to like use that whole type of thematic mushroom thing that he has going on from that website onto yours in some sense to make it more of a like sensory out of experience or out of box type of uh website in general while meeting the requirements from

00:09:07

Jerwin Cabañeros: Good morning.

Arianna Sanchez Narita: WC. Um so I think that's one of our main objectives and what we're trying to go with. Uh, I don't know if you have something to add on,

Jerwin Cabañeros: Um yeah, I think uh we just want pretty much like we really wanted to um ask you if you have like some

Arianna Sanchez Narita: Sherwin.

Jerwin Cabañeros: pref like design preferences that you guys that you want us to like implement for the website because um uh yeah like uh like Kevin's work is already like he he already set the standard.

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: So like we kind of tomorrow we'll be discussing you know like some of our ideas but we're here to talk about like how you know if you have any preferences basically like how we would integrate like some accessibility features like is there anything that you want us to work on so we can discuss it tomorrow with

Peter Farbridge: Um,

Jerwin Cabañeros: Kevin

Peter Farbridge: maybe I have a question like I can answer that question, but I have a question first if that's okay.

00:10:05

Peter Farbridge: like what is WC A include?

Arianna Sanchez Narita: Yeah.

Peter Farbridge: What kind of parameters are we looking at to make it like uh official or certified a certified site? What do we need to

Arianna Sanchez Narita: Uh so I read most of the documentation and a lot of it is just to

Peter Farbridge: do?

Arianna Sanchez Narita: take in consideration the most common type of disabilities that you see around the world which can be like a death being deaf blind or so on and so forth. And it's just making the content more readable for those type of people and to make it more of a global type of I don't know how to explain but in a way just more accessible for that audience because right now I think some of the things on the postmarginal website don't respect certain guidelines. For instance, certain images need more description for people who can't really read them or have a type of not AI, but something that reads out to people who can't read text well or have visual impairedness.

So, just a more descriptive type of website depending on the disability that we're working with.

00:11:16

Arianna Sanchez Narita: And there's certain tiers that WCAG has. Um, I think there's AAA, double A, and A. And the higher you are, the more certified you are. So I think that's another thing that we're going to try to focus on, maybe getting into that double A range just so that your website is more in the guidelines of WCAG because I think right now it's still kind of minimal in terms

Peter Farbridge: Okay. Okay.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: of uh the type of tools that it offers. And I think that's what we want to like reinforce like put another layer on top of it.

Peter Farbridge: Okay. So it could we could also talk about um people who are neurodeiverse in a sense.

Arianna Sanchez Narita: Oh yes,

Peter Farbridge: I guess we can look at that.

Arianna Sanchez Narita: for

Jerwin Cabañeros: Yeah.

Peter Farbridge: I mean you you might want to focus in because uh and perhaps Floron will be um a

Arianna Sanchez Narita: sure.

Peter Farbridge: good person to help you decide that when you're when you're finalizing I guess the proposal um because I assume you had to you have to present it to Fion also.

00:12:14

Arianna Sanchez Narita: Yes,

Peter Farbridge: Yeah. Okay. So,

Arianna Sanchez Narita: exactly.

Peter Farbridge: so yeah, um because there's, you know,

Jerwin Cabañeros: Yeah.

Peter Farbridge: the deaf audience that that we have coming to the site, there's also the

um blind audience. There's also, let's say, those who have um physical handicaps as well who need to access text in a different manner as well than the the the keyboard as well.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Some of those interfaces are technologies that um that these people would have, this demographic would have, but others might be facilitated by the site as well in terms of how the

Jerwin Cabañeros: All right.

Peter Farbridge: information is presented in the site and how it can be read um to uh to another machine, how it can be translated to another machine. And I think there's also um the idea of the um well I mentioned it of the neurodeiverse in terms of colors in terms of account um is there is the text simple enough are there options toggle options for simplified text that we can use um and I'm curious though also within that like

00:13:17

Arianna Sanchez Narita: Yeah.

Peter Farbridge: we purchased in the development of the center cannot hold um a a product or plugin called UserWay um that works with Web Flow. And so User Way, you'll probably see it at the bottom right corner of the screen. It has kind of like uh ways that you can adjust the text. Um I I think it's mostly for it's mostly for neurodeiverse.

Arianna Sanchez Narita: Yep.

Peter Farbridge: Um but it's also like large portions of the community of visually impaired. Um, people also have some degree of sight as well. So, you know, I think it's like 10% of blind people are completely blind and there's all kinds of ranges within that. So, within that community, there's a lot we can do to make it easier for them to access information and enjoy the site as well. So, so yeah. So, I'm just like um curious to know like how you would interface with like something like UserWay like what how do you relate to that as a product and does it help you

00:14:38

Jerwin Cabañeros: Um I think like one thing that we could that we would like to also like highlight is that when we visited the Kevin's work it's really beautiful But in terms of like the accessibility, like there's just like this one icon on the like lower um lower part lower

end part of the website and it I feel like it's not it doesn't really like I don't know in terms of like like visually speaking it's like very very small like the icon to toggle the options to like for example like to uh change the contrast or to change the font.

Peter Farbridge: Yeah.

Jerwin Cabañeros: it doesn't it's not really like um I would say like when you visit a website it's it's kind of small so we we're thinking of like ways and how we can like highlight that when uh say for example

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: like this like um a person with disability like navigates the website like how can they see it right away like basically that's what I noticed

Peter Farbridge: Yes.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Great

00:15:35

Arianna Sanchez Narita: Because even for me not using like when I first entered the website,

Peter Farbridge: idea.

Arianna Sanchez Narita: I didn't know that the icon was for that and like by clicking on it,

Jerwin Cabañeros: Just

Arianna Sanchez Narita: I could modify it and everything.

Peter Farbridge: Right.

Arianna Sanchez Narita: So, I think for somebody who has like some type of visually visual impairedness, I don't think they would be able to recognize it either or figure out what it's for because even we struggled to understand what it was for at first.

Peter Farbridge: That's a great that's a great point. Yeah. Thank you. Yeah. So,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: it's useful, but it's just like yeah, gaining access to that and then and but that doesn't necessarily make the site

Arianna Sanchez Narita: Yeah. Exactly.

Peter Farbridge: compliant, right, with WC A.

Jerwin Cabañeros: Mhm.

Peter Farbridge: It doesn't necessar that doesn't do everything.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: So what do we have to do? Do you think

Arianna Sanchez Narita: Um,

Peter Farbridge: like

Arianna Sanchez Narita: for this I believe it would be h it would have to move away from the text.

00:16:24

Arianna Sanchez Narita: Like we have the text being modifiable and everything. That's a great start. But then the next thing would be the type of way it's displayed on the screen.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: We have to kind of change that just to make it more evident for people who need the stuff big like more evident for them or make the images smaller when it's not that important.

Peter Farbridge: Mhm.

Arianna Sanchez Narita: just to make it clearer for people and in terms for neurodivergent people I think that's also very useful um and also as well for any type of video or audio type of like uh images we have going on here there has to be some type of description of what the image is because right now there's not much from what I'm seeing and also for the audio as well there needs to be a close captioning type of situation for it to at least meet the view CAG requirement like a double A standard. And I think that's the main focus that we're going to have to do and just make it more obvious

00:17:17

Jerwin Cabañeros: There you go.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: in general again for the accessibility tools because they're really great. They're well coded and everything, but it's not enough. It still hits like the bottom line of what the website is to be like

Peter Farbridge: Okay.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: acceptable.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: And since Yeah.

Peter Farbridge: Okay. Perfect. That that makes a lot of sense to me. Um so yeah from go ahead

Arianna Sanchez Narita: Oh yeah. Oh, and I just Yeah,

Jerwin Cabañeros: There's one

Arianna Sanchez Narita: I just wanted to mention one more thing for like people that can't use a keyboard or a mouse.

Peter Farbridge: continue

Arianna Sanchez Narita: Uh, we were thinking maybe an eyetracking type of situation could be interesting on the website just

Jerwin Cabañeros: That's great.

Arianna Sanchez Narita: to help that type of like barrier that certain people have would be a nice interesting proposition. That could be a type of iteration that we do for the

Peter Farbridge: Yeah,

00:18:11

Arianna Sanchez Narita: website.

Peter Farbridge: that's really that's novel. I don't know exactly how that works. So, I'm really I'd be really curious to know uh yeah to find out more about that.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Um you were asking me maybe I can answer your question now actually like like what kind of aesthetic guidelines would you like to follow in terms of it? I mean, I let I mean, Kevin can really like in terms of his work and everything visually can can respond to like things on the page. I'll let Kevin if he's since he's involved, which is great. I'll let him leave that because he's the artist. Um, from the perspective of what Postmaral would like to do. Um there's something here about like a multimodal expression meaning that we can access this world in in different ways through um sight obviously through sound but also through um uh uh things like um uh um how would you say um more like more feminological like how do you feel when you when when you see it when you hear it.

00:19:24

Peter Farbridge: So, how does the layout the um the presentation, what kind of

experience does it give us inside of our body? In some ways, moving away from a kind of like a squaredness of presentation of text and everything is an attempt to do that. in some ways to find things that are actually going to have a a like a psychophysical response in the people that are visiting um the site which is hopefully not a positive one. you know,

Arianna Sanchez Narita: That's

Peter Farbridge: and the sense of perhaps kind of a calming um effect in a in a sense of

Arianna Sanchez Narita: it.

Peter Farbridge: wanting to slow down um the you know, the desire to slow people down and to invite them into an experience as opposed to have this kind of commodified u relationship with the information like give me what I need. I mean there's that to it as well. We we do need information like we don't have always have so much time but the invitation I guess of the site is to slow down and is to have a web experience that resembles an

00:20:32

Arianna Sanchez Narita: That works.

Peter Farbridge: artistic experience and in more particularly a theatrical experience the embodiedness of a theatrical experience. So um how can we get there? you know, sometimes I felt like what was missing from this site um in terms of one of the modes is more sound. Um how can like are the natural sounds like the sounds of water um you know like the sounds of the nature is that possible like as we go down and we scroll down like the about page you know does it

Arianna Sanchez Narita: Yeah.

Peter Farbridge: trigger different sounds as we go? Sometimes that can be really annoying when you're surfing, you know, going. That's right. And we need to put it on mute. So, there has to be the option. But I think to choose the sound option to have that possibility could be interesting in terms of generating one of the important objectives of this site was to create uh a digital world that was more human- centered let's say and more centered in the natural world and could attempt to bring us out of this kind of merkantile relationship with the with the web.

00:21:40

Peter Farbridge: So, if there's stuff that we can do or you can propose or dream of that might embody that or might communicate that that that would be of interest to me as well. Um, and also if we're like I'm not sure how you're going to I guess maybe this is my question for you. What is your method of doing this? Like how how do you do this? Do you want to when when I was talking to Florian about this, he was saying it would be great if they could meet with artists, you know, like that are represented here. So obviously I'm not going to I can't tell you about what the experience of someone who is deaf and and experiencing the site or someone who is blind or some. So, do we want to are would you be interested in making meetings with artists that are coming from this world and and seeing how they interact with the site as well? Is that is that of interest to

Jerwin Cabañeros: Yes. Of course,

Peter Farbridge: you?

Jerwin Cabañeros: it's really I I think like hearing like a firsthand experience from from their community would

00:22:38

Arianna Sanchez Narita: Yes.

Jerwin Cabañeros: be really helpful for us because yeah, we don't have any idea like how like for example like my my brother is a deaf like I don't know how

Arianna Sanchez Narita: Okay.

Jerwin Cabañeros: he like navigates you know different websites. So I think it would be good to hear from them.

Peter Farbridge: Oh,

Jerwin Cabañeros: Yeah.

Peter Farbridge: okay. Okay. So,

Jerwin Cabañeros: Yeah.

Peter Farbridge: you have uh you have family who can uh who can also you can you can you can consult on this as well. Okay. Um,

Jerwin Cabañeros: Yeah.

Peter Farbridge: do you who like would it be interesting like to speak to an artist from the site or that's already represented or a new artist that

Jerwin Cabañeros: Oh my god.

Peter Farbridge: perhaps we want to put on the site. Um, maybe we should look at something like that. Like I would like to I would like to to add like we're working on a

show right now called La Machine Dece and there's a few artists there.

Arianna Sanchez Narita: Oh,

00:23:37

Peter Farbridge: one who is deaf, a dancer, Kai Glover. Another woman, Ganon Cummings, whose work I'd like to put on here,

Arianna Sanchez Narita: what the heck?

Peter Farbridge: um, who was a visual artist in a wheelchair. So, her work is of real interest to me as well. Um, and her perspective on this and I think she would be willing actually. Um, and so the artists that were working on it are contributing to Postmarginal at the moment. be interesting to get in contact with them as well.

Arianna Sanchez Narita: Yep.

Peter Farbridge: Um, but I just I don't want to do it without just you know like you have to you have to sort of want that as well I think for yourself and and that's not too much is what I mean. I know you would want it but sometimes these things are great but you don't have the capacity to do it and because if you engage then we have to engage properly you know like we it's not a halfway thing. We have to take the time to learn about the person, their needs um and so that and you know to maintain the relationship because often as you probably know these communities um are very isolated and are very like um not included in the sensory world.

00:24:52

Peter Farbridge: Um, so the feel the feelings of being marginalized and the feelings of being ostracized and left out can be quite strong. So everybody makes mistakes. I make mistakes after so many years working um in these communities. But I guess it's important for us to engage in a way that's meaningful if we're going to do it. So I think that's just something to reflect upon. um if you have personal contacts that might be easier than um consulting outside but also I think it could be really rich for you too as an experience to have connection and interaction with these artists. I think it's it could actually feed your learning process in a really significant way. So that would be something to consider and maybe to bring up with with Floron as an option to decide. I'm open and I'll support either one.

Arianna Sanchez Narita: Um, no. I'd love to meet with one of the artists just to

understand their point of view and especially if they're going to be included onto
Peter Farbridge: Yeah.

00:25:54

Arianna Sanchez Narita: the website. I think it gives an extra connection to have. Um, I think it'd be great since they're the ones that are also going to be interacting with it and they're our audience that we want to hit also. So, I think it's super important and I'd love to get the connection with them. Like, I don't see a bad side to it. So, why not?

Peter Farbridge: Yeah, it's a plus. plus. Um, all right. Okay, that's great.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Um, did I have any questions? Oh, yeah. Well, what are your questions? Over to you. Do you have another question on your list at all today?

Arianna Sanchez Narita: Let's see. Yeah.

Jerwin Cabañeros: I I have one. So, if we're if we will schedule a meeting,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Yeah.

Jerwin Cabañeros: uh do you have like a timeline for when do we meet like with them? Because like um in terms of my midterms, I I think I just have like midterms like exactly one month from now.

00:26:44

Jerwin Cabañeros: So, it could be anytime. But yeah, like

Peter Farbridge: So your midterms start in uh in mid where are we uh second week of February, second week of March,

Jerwin Cabañeros: like mid yeah second to third week of March.

Peter Farbridge: March. Um, well,

Jerwin Cabañeros: Yes.

Peter Farbridge: it sort of depends also on your on your development of the prototypes and such like that when it feels to me that the information could be interesting right at the top to frame what you need to do and the reality of the people that are accessing the site.

Jerwin Cabañeros: Mhm.

Peter Farbridge: That's a way of trying to understand. Or you could say, okay, we want to

develop some ideas and then we want to test them. Um or it could be iterative. I guess maybe perhaps the best would be on maybe three meetings if it's not too many like one to get a sense what are their challenges and accessing material on the web. The second one presenting them with ideas of solutions. I know we're not developing here but we're prototyping but at least saying would this work?

00:27:55

Peter Farbridge: Maybe there's examples out there that we could access as well. and then maybe a final one just to sign off. I don't know, something like that.

Jerwin Cabañeros: for sure.

Peter Farbridge: So, when the end of your term is like end of March, early April is it?

Arianna Sanchez Narita: uh early April, I believe. I think April 13th or something like that.

Jerwin Cabañeros: Yeah,

Peter Farbridge: And when do you have to submit this

Arianna Sanchez Narita: Yeah.

Peter Farbridge: project?

Jerwin Cabañeros: I probably first week of April or like at the latest I don't know

Arianna Sanchez Narita: Um

Jerwin Cabañeros: like or late March or something like this.

Peter Farbridge: Okay. All right. So, we can work in February.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: You can try to get the first meeting in before the end of the month. Um, and I would set it up after you send me the a text, let's say, on the prototype. Oh, I mean on the project, I meant to say um what you want to do.

00:28:54

Arianna Sanchez Narita: Mhm.

Jerwin Cabañeros: Yeah.

Peter Farbridge: That way I can communicate with that information and um and it describes to them exactly what's going to happen um that will be helpful. And then let's say that we keep like the first week,

Arianna Sanchez Narita: Mhm.

Peter Farbridge: the first two weeks of March clear for your midterms so we're not, you

know, getting stressed around that time. and then repick things up in terms of meetings of the second and the third week of March. Does does that does that make sense?

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: And I think it's also going to be nice because we're going to have met with Kevin.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: So, we'll have like a clear type of delivery for you to prepare for the following

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: meeting.

Peter Farbridge: Yeah. Okay. Okay.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: Cool. Yeah, that's right. You're meeting with Kevin tomorrow.

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: Uhhuh.

Arianna Sanchez Narita: Exactly.

Peter Farbridge: um you know just from my perspective like from postmarginal as a company and such like that I think what I'm one of the things I'm excited about is like having the having a solid research and having a solid proposal to go back to a funer like maybe Heritage Canada like or or maybe the Canada Council someone and say okay this is what we've developed through a partnership

00:30:10

Jerwin Cabañeros: Mhm.

Peter Farbridge: with young designers and we really would like to put it into action and to create a project and have a bunch of money to actually develop the ideas and uh to put them into into practice. Who knows? I'm not sure how it works, but maybe you could be involved in that project as a professional project afterwards um in different elements of it. So my dream would be that is that we build upon what you do in order to develop something in which you can continue the involvement if you so choose if if you find it pertinent after after finishing it. So that's what I'm hoping that comes out of that.

Jerwin Cabañeros: Mhm.

Peter Farbridge: Um so I don't know what product you create. Is it something with design elements in it where we actually see how you know we see visually what it is or is it just written? What is what is your what is your final submission?

Arianna Sanchez Narita: Um I don't know if you want to say or I'll explain it. I don't mind.

00:31:20

Jerwin Cabañeros: Uh yeah, you can

Arianna Sanchez Narita: Um, I think we were mainly going to first like prototype and wireframe on Figma,

Jerwin Cabañeros: explain.

Arianna Sanchez Narita: which is a good app for UX and UI type of website designing, app designing. And it allows also to show like the user flow and like test how well

Peter Farbridge: Uh-huh.

Arianna Sanchez Narita: everything flows out together on a website. And I think that was our main focus because it's very design focused and we're both we both specialize in that. So, it's perfect for us.

Peter Farbridge: Okay.

Arianna Sanchez Narita: And it's also super easy to present to people who don't know Figma and it gives a nice deliverable at the end. So I think that's what we were mainly going to focus on. I don't know if you have anything to add

Jerwin Cabañeros: Yeah, I mean like that that was our plan,

Arianna Sanchez Narita: Jerwin.

Jerwin Cabañeros: But we'd be like, we can talk about like continuing this and like making it a full-fledged like website because like we're really like we're beyond happy to have um the intro to work on this and like it's really meaningful

00:32:12

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: for us because uh you know we're kind of like graduating students. So we'd be open to discuss like making it like a you know integrate this and and like work on it basically after after the class.

Peter Farbridge: Yeah,

Arianna Sanchez Narita: 100%.

Peter Farbridge: who knows?

Arianna Sanchez Narita: 100%.

Peter Farbridge: Who knows?

Jerwin Cabañeros: Yeah.

Peter Farbridge: Maybe Kevin Kevin will stay as like a consultant on it,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: you know, and and we could, you know, see if he'd be willing to u be hired as a consultant to manage

Jerwin Cabañeros: Mhm.

Peter Farbridge: a little bit of the of the process of redevelopment of the site. So, so to try to keep it going. So, yeah, just so I'm forward thinking on it as well in terms of documenting our process together as well, which is I I should have asked you first, but I I asked Gemini to take notes on the on the meetings so that we have a trace of what we we talk about and such. And I would be really happy if you don't if you would, you know, I'm not asking you to take notes at every meeting, but just to let me know like if there's some way to let me know what was said on your side.

00:33:18

Peter Farbridge: Um like with Kevin for example, what kind of things did you discuss? I think that would be great for me to be able to create a proposal afterwards to talk about, you know, this is the nature of the project and and to show that it came from, you know, really a a deep relationship with the people that developed the site and with the artists and everything.

Jerwin Cabañeros: Of

Peter Farbridge: I think that would be strong. So, yeah. So, I think documentation was another thing that I was going to just ask you if we can collaborate on.

Jerwin Cabañeros: course. Yeah, I took some notes during this meeting. So, yeah,

Arianna Sanchez Narita: Yeah,

Peter Farbridge: Yeah.

Jerwin Cabañeros: I'd be Yep.

Peter Farbridge: Yeah. I don't know how you feel about AI.

Arianna Sanchez Narita: likewise.

Peter Farbridge: Um, but I I use it I use it like I try to use it for intelligent things like things that I couldn't do myself you know so I try not to get lazy and to abuse it but um yeah but sometimes for for things like this I can fi I find it really helpful for for notetaking for meetings and and developing things out of that.

00:34:24

Peter Farbridge: So anyway, yeah, cuz not everyone's for it ethically as well. Some people are really like strongly against it. Um, even people that are on the site as well,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: like uh that artists that are on the site. So I try to try to develop an a way of looking at it ethically as well in terms of that. So yeah. Anyway, um, yeah. So that's I think that's it for me. I'm I'm I'm happy with that. What other questions might you have?

Arianna Sanchez Narita: Um, I think I'm okay. I don't know.

Jerwin Cabañeros: same. Um

Arianna Sanchez Narita: I'm just looking through uh what I wrote down.

Jerwin Cabañeros: give Oh yeah.

Arianna Sanchez Narita: Uh,

Jerwin Cabañeros: I guess like one thing that I wanted to um ask was that like the tagging system because I think it was mentioned um when a representative from your team went to our class and they went basically highlighted um tagging system into your website. like is there do you can you like expound on that like um cuz that

00:35:32

Arianna Sanchez Narita: I would say Yeah.

Jerwin Cabañeros: was like I wanted to clarify that basically.

Arianna Sanchez Narita: Or is that more a question for Kevin?

Jerwin Cabañeros: Oh,

Peter Farbridge: Um, I don't know.

Arianna Sanchez Narita: Oh,

Peter Farbridge: I don't think so.

Arianna Sanchez Narita: I don't know.

Peter Farbridge: No,

Jerwin Cabañeros: okay.

Peter Farbridge: Kevin was more design and visual. Um I obviously he was like involved in it as well,

Arianna Sanchez Narita: Okay.

Peter Farbridge: but I think it came more from Crystal Chan and myself um in terms of finding finding tags that had less to do with like identifiers in terms of like a blind person or a black person or a deaf person like these kinds of social

Jerwin Cabañeros: Come

Peter Farbridge: identifiers and more from the sense of what people what what these artists

Jerwin Cabañeros: on.

Peter Farbridge: are actually creating. What's their work about? What kind of themes are they exploring? Um, so for example, there could be a woman from Rwanda who's a storyteller, Lisa Najuru, who's talking about ancestors in her work um because she translates and transcribes and adapts um stories from Rwanda that are like 300 400 years old and tries to bring them back to life.

00:36:44

Peter Farbridge: And there's another woman also uh Verik West who is writing or who is creating a performance artist creating based on uh gaps I guess in her own history personal history in Poland and things that were not said. So these intergenerational traumas that she or they sorry they are working out in their in their own practice through their own art. So the notion of ancestors was the tag that joined these artists.

Jerwin Cabañeros: All

Peter Farbridge: And this is the relationality I guess you might say is that here's two different artists from doing two different types of work from two different parts of the world who might normally not have any resemblance if you tag them according to this is performance, this is storytelling,

Jerwin Cabañeros: right.

Peter Farbridge: this is black theater, this is uh let's call it um neurodeiverse um theater because I I I believe that they identify in that way um or non-binary let's say theater. So to pull it away from those social indicators and more towards what is what it combine what it what fascinates them as artists. So I think that's the kind of idea just to give you like one concrete example of how that

00:38:02

Jerwin Cabañeros: Uh-huh.

Peter Farbridge: tagging might be done. And I think we have I'll have to find it for you, German, but I think we have um a table of all of the tags that we used for the site. So yeah, I think there's like something like I can't remember like maybe 32 or something like

that or maybe more 40 different tags that we were using and and they would come in different um and we would with the artists each of their posts, each of their entries, we would tag them with their consent like they we would ask them how do you see your work? Choose these tags that describe your own work. Um so they themselves are identifying and naming what their work is about. Um yeah so I think I so that was the that was that was the nature of what we did and then

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: I see

Arianna Sanchez Narita: So,

Jerwin Cabañeros: him.

Peter Farbridge: the rest is like normal tagging the way these machines the way the algorithms work.

Jerwin Cabañeros: Okay.

00:39:03

Arianna Sanchez Narita: Okay.

Jerwin Cabañeros: That's really helpful.

Peter Farbridge: Yeah no problem.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: My pleasure. Yeah. So that's yeah that would be cool to uh to look a bit look a bit at that as

Jerwin Cabañeros: Yeah,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: well again.

Jerwin Cabañeros: do you have questions, Ariana?

Arianna Sanchez Narita: Uh, no, I think I'm okay. Um, yeah, this was very helpful in terms of like a guideline or like a path to take for

Jerwin Cabañeros: Say

Peter Farbridge: Yeah, cool.

Arianna Sanchez Narita: this.

Peter Farbridge: I'm glad. Yeah. If there's any other questions, you just like fire me like a text or or an email tomorrow when you're talking with Kevin or something like that. What time is your meeting?

Jerwin Cabañeros: matter of sense.

Arianna Sanchez Narita: at 3 3:00 p.m.

Peter Farbridge: At 3 p.m.

Arianna Sanchez Narita: tomorrow.

Peter Farbridge: Okay. Okay. I think yeah,

Arianna Sanchez Narita: Yeah.

Peter Farbridge: I'm around then like between 3 and 4. So, if you have any questions or anything, um just like just send me an email and we can just like get online or something like that or whatever, but I'll be around.

00:40:23

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: of course. Yeah.

Peter Farbridge: Yeah.

Jerwin Cabañeros: All right.

Arianna Sanchez Narita: Um,

Peter Farbridge: Super.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: uh, last thing. Would you want me to email you the stuff we talked about or do you want to keep that for the next meeting for when we

Jerwin Cabañeros: Okay.

Arianna Sanchez Narita: meet again like this?

Peter Farbridge: Um, how do you uh It depends on how you'd like to work because I can share with you

Arianna Sanchez Narita: Okay.

Peter Farbridge: like a Google folder and we can dump stuff in that folder.

Arianna Sanchez Narita: Yeah.

Peter Farbridge: We can share it and dump stuff and so our meeting notes and everything even a schedule

Jerwin Cabañeros: Yep.

Arianna Sanchez Narita: I think that is perfect.

Peter Farbridge: like so we both we're all on the same page.

Arianna Sanchez Narita: Yeah,

Peter Farbridge: Is that that a good way to

Arianna Sanchez Narita: exactly.

Jerwin Cabañeros: That would be great.

Peter Farbridge: work?

Arianna Sanchez Narita: Yeah.

Jerwin Cabañeros: Yes.

Arianna Sanchez Narita: I like that we're all connected in some way while we're working on

Peter Farbridge: Yeah.

Jerwin Cabañeros: Yeah.

Peter Farbridge: Yeah.

Arianna Sanchez Narita: this.

Peter Farbridge: Yeah. Yeah. Exactly.

Arianna Sanchez Narita: Okay, perfect. So,

Peter Farbridge: Yeah.

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: we'll do a Google Drive then for all the stuff that's happening along the way.

Peter Farbridge: Amazing. Yeah. Super.

Arianna Sanchez Narita: Perfect.

Peter Farbridge: Okay. Is that everything?

Arianna Sanchez Narita: Yes. For me,

Jerwin Cabañeros: Yeah.

Arianna Sanchez Narita: yes.

Jerwin Cabañeros: Uh it's really helpful.

Peter Farbridge: Yeah. No problem at all. No problem at all.

Arianna Sanchez Narita: Yes. Yes. Thank you. Lovely meeting you.

Kevin Meeting 1 Notes - Arianna

NOTES FROM MEETING_1 WITH KEVIN (Designer)

Design Focused thoughts:

- Breakup the images
- Create a collage feel
- Preview the information before the user has to interact with it
- Change the background of where the information is on

Concept focused thoughts and ideas mentioned:

- "We are the bridge between accessibility and art in a way"
- Have to find an in between of the requirements and the aesthetics
- How to create an unconventional website feel for it to be considered art

To remember/note/takeaways:

- Take inspiration from CenterCannotHold's accessibility menu/bar
- Maybe transfer the mushroom concept onto the actual Postmarginal website
- If we want to include sound there are musts we need to do:
 1. Have an option to turn it off
 2. It doesn't hinder the interaction with the website
 3. Simply an add on to the website
 4. Make sure there's close captioning about the sound
- BREAK UP the information make it fun
- Kind of like a puzzle
- Make sure the tab button works well "Kevin was testing and clicking it a lot"

NEXT STEPS:

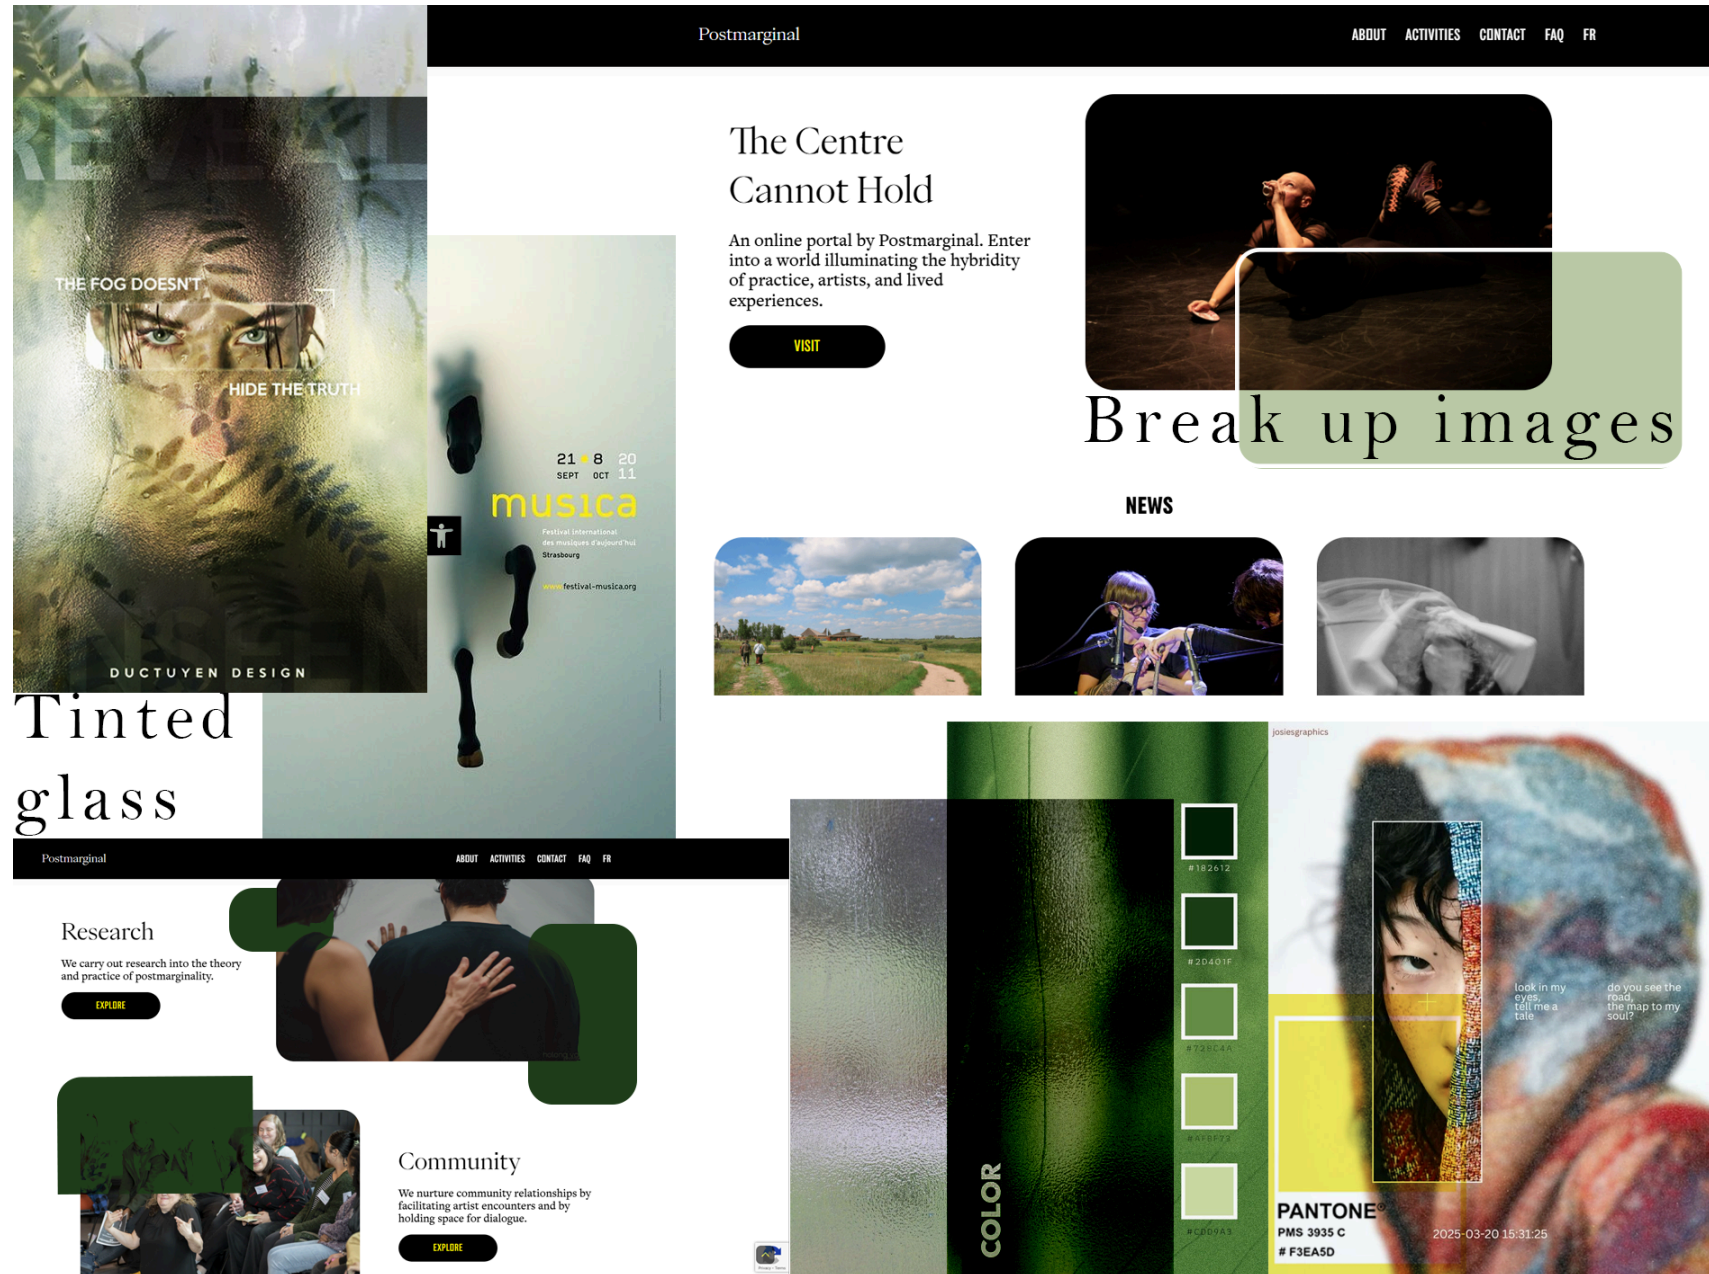

- Moodboarding

- Prototyping/Figma
- Pinterest board for inspiration was started

Mood Boards 1/3 - Arianna

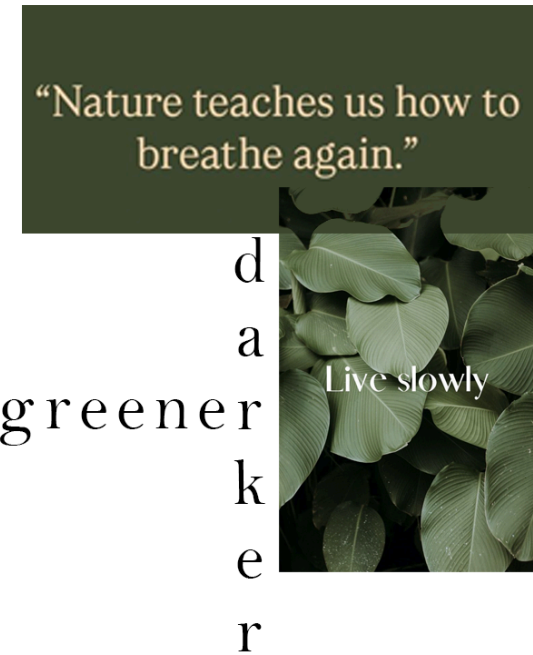

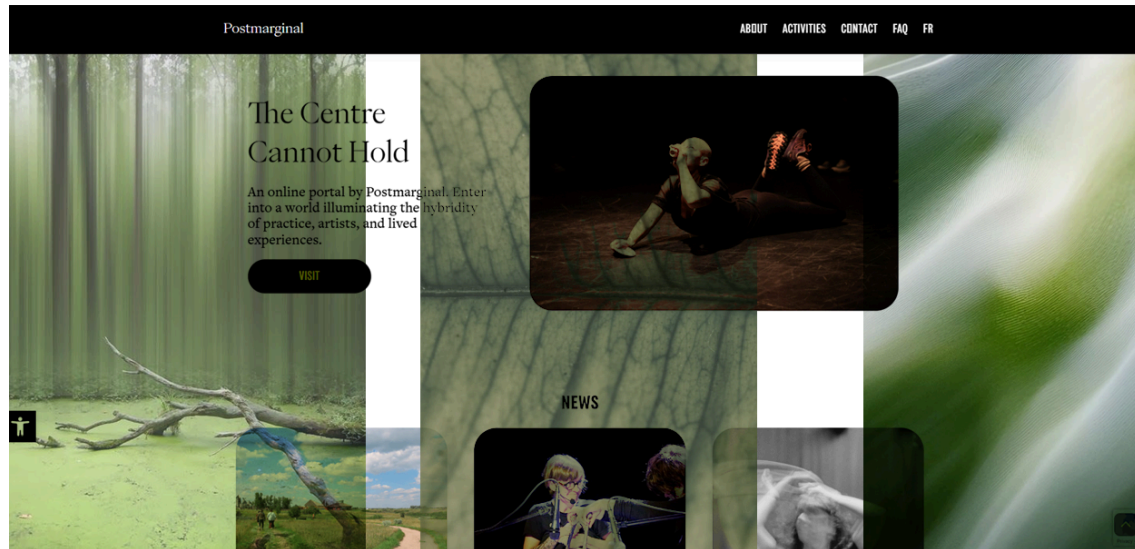

Mood Board 1: Puzzle like theme with tinted/frosted glass - collage of images

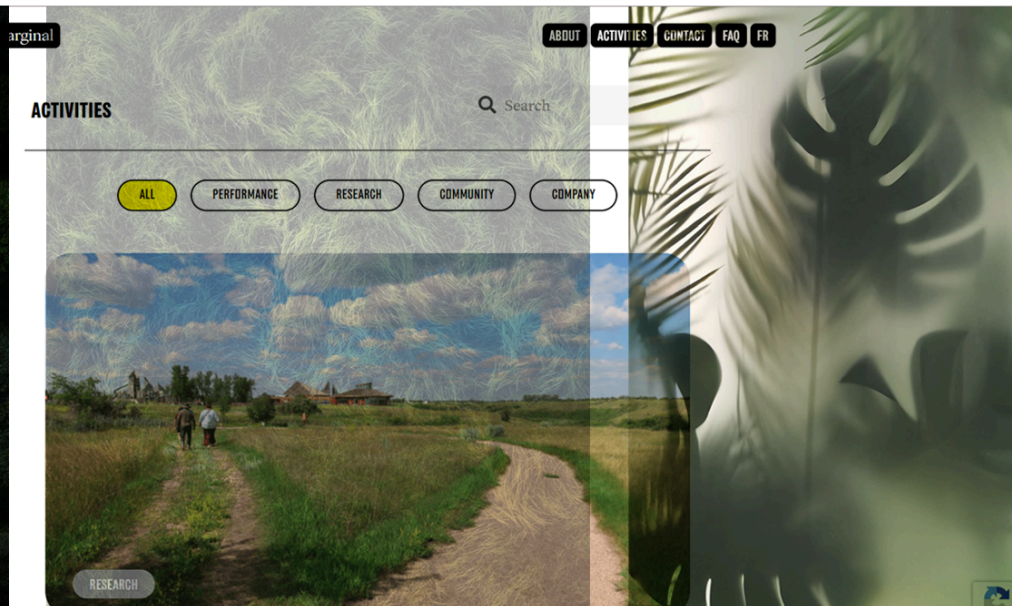

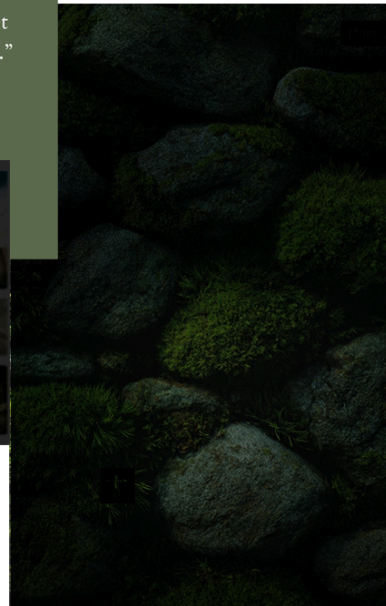

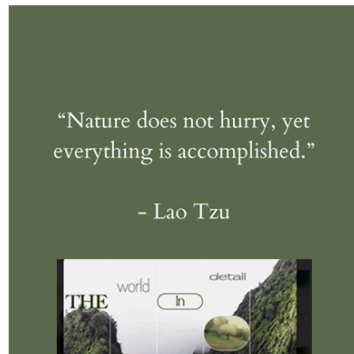

Mood Boards 2/3 - Arianna

Mood Board 2: Background focused and more thematic

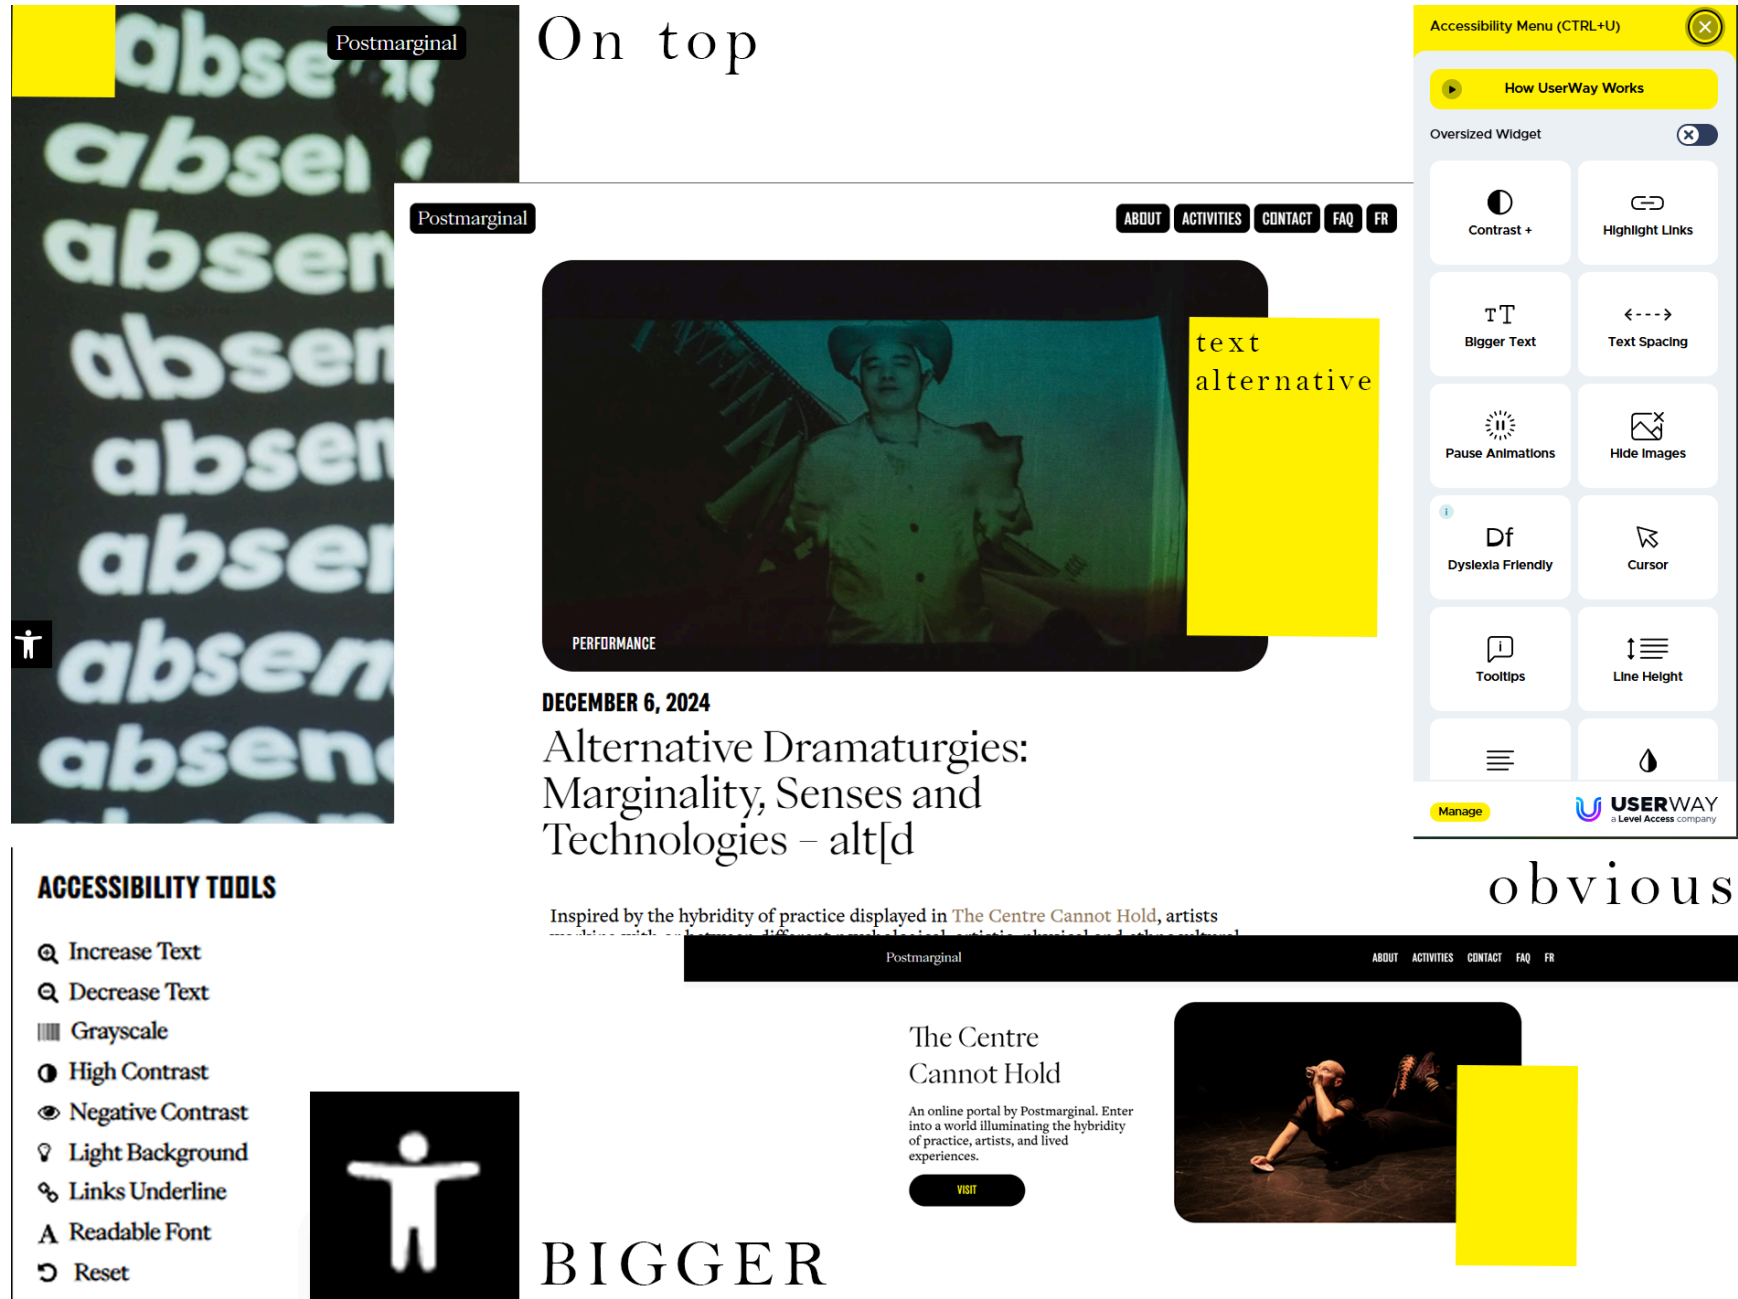

BACKGROUND

Mood Boards 3/3 - Arianna

Mood Board 3: Accessibility focus and issues on current Postmarginal website - Inspired by center cannot hold website

Low

Kevin Meeting Notes - Jerwin

Kevin Meeting Notes - Jerwin

Website Redesign Key Points

1. Visual Direction

- Black base + strong imagery
- Floating elements instead of rigid grids
- Collage-inspired, tactile, less corporate
- Experimental but structured

2. Homepage Strategy

- Promote content immediately
- Show featured works upfront (no filtering first)
- Treat homepage like a curated exhibition

3. Accessibility Fixes

- Dropdowns are not accessible -> redesign
- Fix FAQ interaction.

- Ensure keyboard + screen reader compatibility.

4. Experiential Scrolling

- Consider parallax (intentional use).
- Define pacing of scroll.
- If using sound:
 - Avoid overlap.
 - Make it meaningful, not decorative.

5. Interactivity

- Interactive > decorative.
- Every motion should reveal or connect content.

6. Structure & Flow

- Interconnected content (themes overlap).
- Less rigid, less linear.

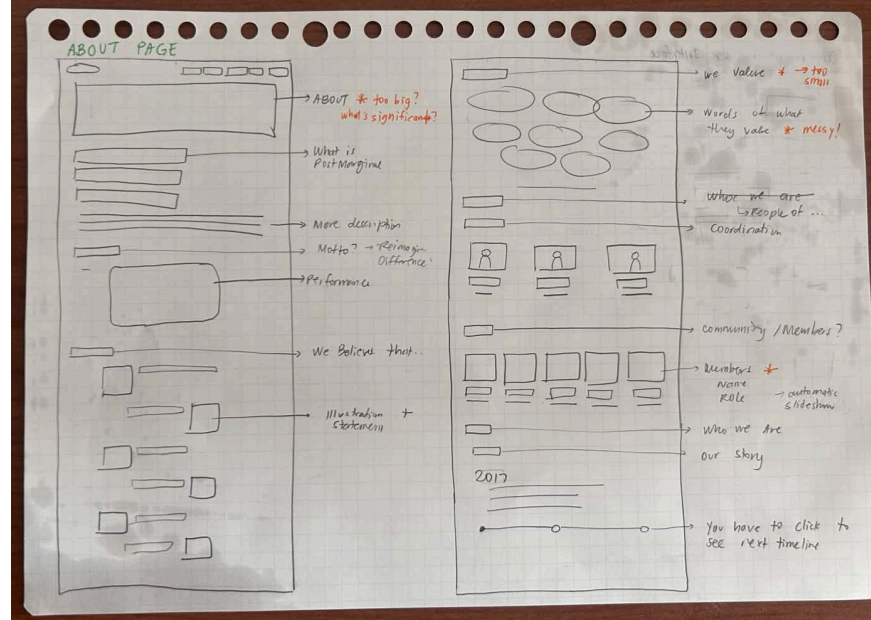

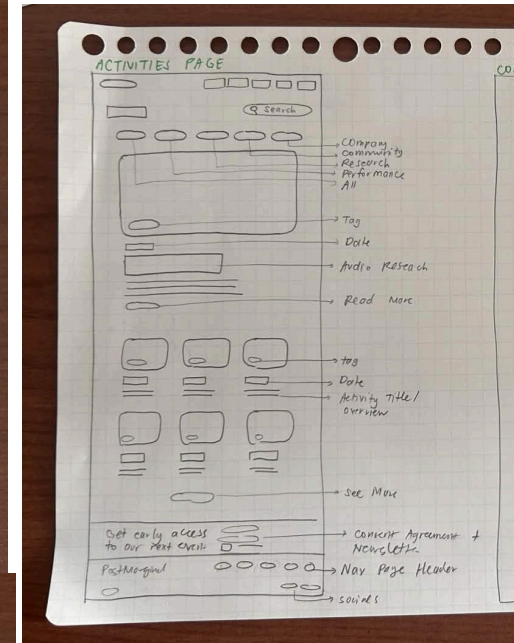

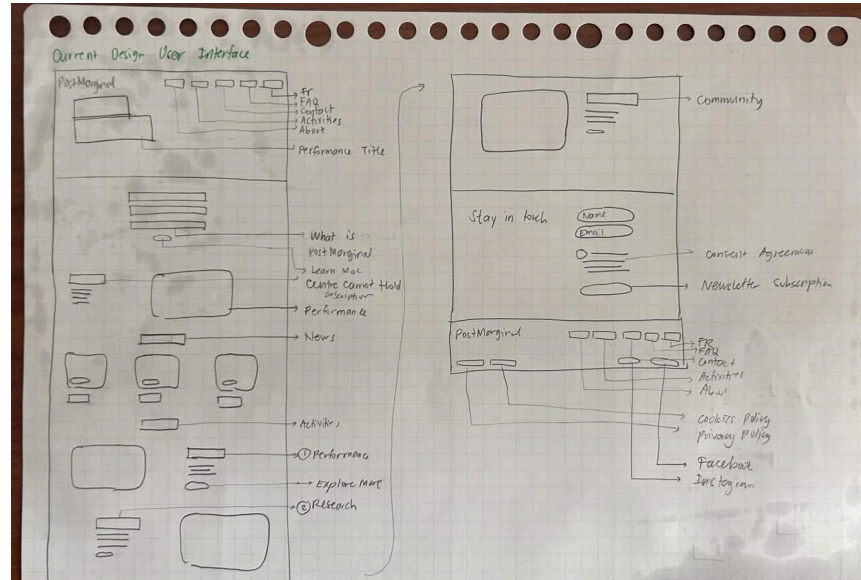

- Organic progression through content.
- Possibly infinite or fluid scroll.

Goal

Create a website that feels immersive, interconnected, and experiential while remaining accessible and intentional.

LoFi

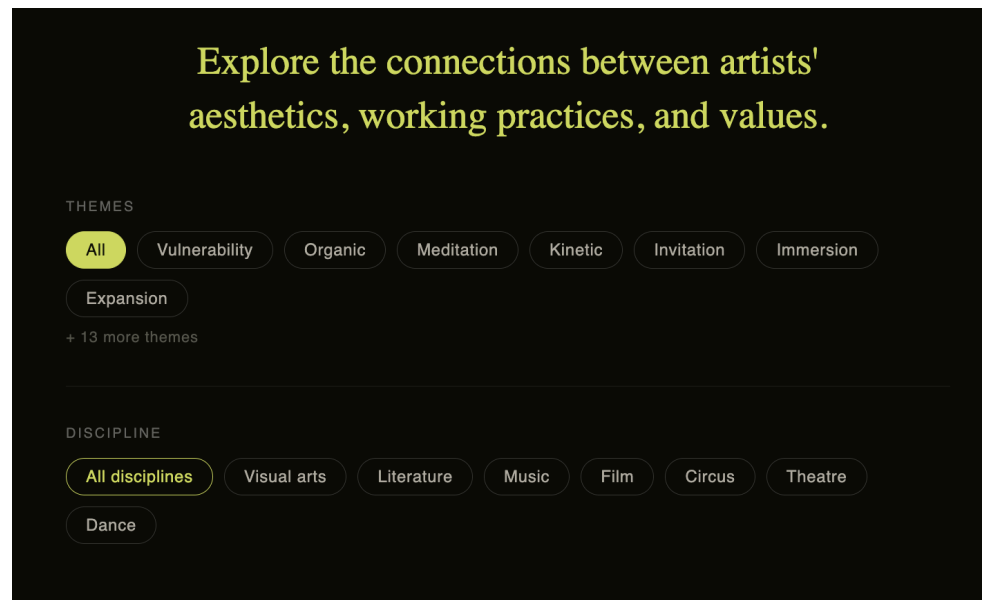

Current IA of PostMarginal Jerwin

Changes:

Resources Page Tags: Reduce them

1. **Progressive disclosure** - show fewer tags by default, reveal more on demand. Don't present 20+ concepts simultaneously.
2. **Clear grouping with labels** - separate "Themes" from "Disciplines" visually and semantically, so users know what they're filtering.

Florian and Vytautas Meeting Notes - Jerwin

Accessibility Interview Notes

Florian's advice

For the disappearing widget and navigation menu, look into ARIA guidelines. Accessible dropdown or floating menus rely on attributes like [aria-haspopup](#), [aria-expanded](#), and [aria-controls](#) so screen readers can understand the menu state and relationship to its button.

Potential suggestion: make the nav bar fixed so users can still access it with screen readers / keyboard arrows

Useful resources:

<https://youtu.be/2oiBKSjOOFE?si=b4PUqZQMtDxP3EfE>

https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/menu_role

Interviewee: Vytautas (Blind Artist)

Goal: Understand accessibility needs for visually impaired users in the website redesign.

Vytautas explained that blind users primarily navigate websites with **screen readers and the keyboard**. Arrow keys are commonly used to move through content, so sites that rely heavily on scrolling or complex layouts can be difficult to navigate. Finding specific artists or information can take time if users have to move through long pages sequentially.

Because of this, **structured navigation** is important. Clear headings, menus, and keyboard-accessible links help users jump directly to relevant sections instead of scanning an entire page.

Scrolling should also be minimized where possible. Instead of long pages, the site should provide clear entry points such as menus or links to sections like artist lists, disciplines, or categories.

Vytautas also emphasized the importance of simple and well-organized menus. Rather than visually dense layouts, users benefit from clearly categorized content. For example, artists could be grouped by discipline (e.g., alternative theatre, multimedia, poetry, etc.), allowing users to navigate directly to the category they want.

On the homepage, users should immediately see accessible navigation options: a clear menu, category buttons, and links to artist profiles. Filtering can also improve accessibility if implemented clearly. For example, selecting a category such as “Poetry” should lead to a list of artists, and selecting an artist could show performances where they are involved both as a main performer or collaborator.

Another key point was reducing visual and structural clutter. Too many elements can slow navigation for screen reader users. A minimal layout with clear buttons, links, and categories makes the interface easier to understand.

Vytautas also mentioned difficulties with forms, especially when **autocomplete** activates automatically. In some cases, autocomplete suggestions appear immediately and trap the user in the suggestion list, making it difficult to navigate away using the keyboard. Ideally, users should be able to control whether autocomplete is enabled, for example with a toggle option.

Finally, screen readers often switch to a **forms mode** when entering input fields. This mode changes how keyboard commands behave. For example, *Enter* activates a field, *Tab* moves between fields, and *Esc* can exit the field or forms mode. Forms should be designed so they work smoothly with these standard keyboard controls.

Learnings

Prototyping Notes

Fri, Mar 27

In prototyping the website, I learned that it's best practice to label every buttons clearly for screen reader purposes as Figma does not implement it directly (i.e., "submit form" instead of "submit"). Also, grouping elements ensures that the screen reader scans the content in logical order (i.e., top -> left -> right -> bottom). Moreover, using reusable components makes it easier for developers to use accessibility tags.

Screen reader feature works like: what content / section am I reading at?

Creating Component

In Figma, you want:

One Navbar Component

With multiple variants (states)

Instead of:

- Frame 1: default
- Frame 2: About hover
- Frame 3: Resources hover
- etc.

You should convert them into:

1 Component Set (Navbar)

- Variant: Default
- Variant: About Hover
- Variant: Resources Hover
- Variant: Contact Hover
- Variant: Explore Hover

Finished the Navigation Bar component: Friday, Mar 27

1st User Testing (Feedback)

Monday, March 30
with Veronique West

User Testing – Veronique

Overall

- Strong **aesthetic + simplicity**, but **clarity is lacking**
- Text feels **nice but not meaningful**
- Needs better balance: **clear + intriguing**
- Too much information = confusion
- Prefers less clutter

Navigation

- Nav bar **not responsive**, but **intuitive and predictable**
- Easy to know **what to do next**
- Some confusion with **nav vs. parallax** (more intuitive on mobile)
 - They personally don't prefer a parallax navigation*

Clarity & Content

- Unclear: **what is the project about?**
- Needs **plain language**
- Important for **accessibility (neurodivergent users)**

Typography

- **Readable + good contrast**
- Use **sans-serif** (current serif reduces accessibility for dyslexic people)

About Page

- Purpose **not immediately clear due to the featured text at the top of the page**
- **Move quote lower**, add clear intro first
- Content is relevant, but **writing needs clarity**

Explore Page

- **Well-organized, uncluttered**
- Categories good, could be **more streamlined**

- Background is **too aesthetic / not functional**
- Content is engaging → users want **more + customization**
- Check **screen reader accessibility**
